OBJECTIVE SUMMARY

Third-year Bachelor of Science in Computer Science student with hands-on experience developing full-stack web and mobile applications through academic and personal projects. Experienced in designing scalable systems, implementing role-based solutions, and building applications that address real-world challenges. A fast learner with strong problem-solving and collaboration skills, eager to contribute to meaningful projects while gaining hands-on industry experience as a software developer.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C++, PHP, JavaScript, SQL
- **Frameworks & Libraries:** Laravel, React, Vite, Tailwind CSS, Flutter
- **Web Development:** HTML, CSS, REST APIs, Responsive Design
- **Database Management:** MySQL, Firebase, SQLite, PostgreSQL, SQLite, Database Design
- **Software Concepts:** Object-Oriented Programming (OOP), Data Structures & Algorithms, CRUD Operations, Role-Based Access Control (RBAC), Authentication Systems, Software Design Principles
- **Tools & Infrastructure:** Git, GitHub, Visual Studio Code, Composer, npm
- **Soft Skills:** Problem-Solving, Team Collaboration, Adaptability, Project Leadership, Communication

PROJECTS

YTR Chapter Centralized Management System

Laravel, MySQL, AI Integration

Full-stack thesis system for a 60–500 member student organization

- Engineered a role-based web system (RBAC) supporting 7 distinct officer roles, including President, VP, Secretary, Treasurer, Auditor, PIO, and Project Officer, with scoped permissions for each.
- Built a secure authentication system with session handling and role-based route restrictions to protect member and officer data.
- Designed and implemented modules for announcements, events, and member management, streamlining chapter operations previously handled manually.
- Integrated a Wisdom Archive feature with AI-powered search, enabling fast document retrieval and automatic summarization for organizational records.
- Built dynamic, real-time dashboards pulling live data from a MySQL database to give officers visibility into chapter activity.
- Applied software engineering principles throughout, including system design, user role modeling, and workflow automation.

FocusOS – Intelligent Wellbeing App

Flutter, Firebase

Independent mobile project

- Developed a Flutter-based mobile system with real-time app usage monitoring to help users build healthier digital habits.
- Integrated Firebase for dynamic analytics and push notifications, enabling timely behavioral nudges based on usage patterns.
- Implemented a dedicated focus mode and behavior-tracking system to support sustained user concentration.

AutoCare Car Services Management System | Full-Stack Web Application

Personal Project

- Developed a complete car service management platform for appointment scheduling, customer management, and service tracking.
- Built secure authentication and role-based access controls for system users.
- Implemented CRUD operations and database management for customers, vehicles, and maintenance records.
- Created dashboards and reporting features to improve operational visibility and workflow efficiency.
- Applied software engineering principles including database design, system architecture, and responsive web development.

RELEVANT COURSE

- Software Engineering
- Database Management Systems
- Data Structures and Algorithms
- Object-Oriented Programming
- Web Development
- Mobile Application Development
- Computer Networks

EDUCATION

Bachelor of Science in Computer Science

2023 – Present

Eulogio “Amang” Rodriguez Institute of Science and Technology (EARIST)

Senior High School

2021 – 2023

Mary the Queen College of Science and Technology

CERTIFICATIONS

- **Gen AI to Z: A Career Summit in an AI-Driven World** — University of the Philippines Diliman, March 17, 2026
